TITLE:HR EMPLOYEE LEAVE MANAGEMENT TOOL

GITHUB LINK :<https://github.com/ee5288986-star/TNSDC-FDW-DPI.git>

1. ABSTRACT

The HR Employee Leave Management Tool is a simple web application developed using React. It helps HR teams manage employee leave requests efficiently. Employees can apply for leave, and HR can view the leave status, filter requests by employee, and maintain leave history. The application reduces manual work and improves leave tracking.

2. PROBLEM STATEMENT

Many organizations still manage employee leave manually using paper or spreadsheets. This process is time-consuming and can lead to errors, lost records, and difficulty tracking leave history.

3. OBJECTIVES

- * Create a leave application form.
- * Display leave status (Pending, Approved, Rejected).

- * Filter leave requests by employee.*
- * Maintain employee leave history.*
- * Provide a simple and user-friendly interface.*

4. PROJECT SCOPE

Included Features:

** Apply Leave Form*

** Leave Status Display*

** Employee Filter*

** Leave History*

Future Enhancements:

** Login Authentication*

** Email Notifications*

** Database Integration*

** Admin Dashboard*

5. TECHNOLOGIES USED

** React.js*

** HTML*

** CSS*

** JavaScript*

** Visual Studio Code*

** GitHub*

6. APPLICATION FLOW

Start

Employee enters leave details

Submit leave request

Store leave information

Display leave status

Filter by employee (optional)

Display leave history

End

7. KEY REACT CONCEPTS USED

** Functional Components*

** useState Hook*

** Event Handling*

** Conditional Rendering*

** List Rendering using map()*

** Props (if used)*

8. EXPECTED OUTPUT

9. CHALLENGES FACED

- * *Managing React state.*
- * *Displaying dynamic leave data.*
- * *Filtering employee records.*
- * *Designing a simple user interface.*

10. LEARNING OUTCOMES

- * Learned React fundamentals.
- * Improved JavaScript skills.
- * Understood state management.
- * Built a real-world HR application.
- * Learned GitHub project deployment.

11. CONCLUSION

The HR Employee Leave Management Tool successfully simplifies the process of managing employee leave requests. It provides an easy-to-use interface for applying, tracking, and viewing leave records. The project demonstrates the practical use of React in developing a simple web application.
